OBJECTIVE

I'm a high school student passionate about software development and game development. I have strong foundations in multiple programming languages and web technologies, and I'm actively expanding into game dev with Lua, C#, and Unity. I'm looking for opportunities to contribute, learn, and grow as a developer.

LANGUAGES & TECHNOLOGIES

Proficient

Java

C++

Rust

Python

JavaScript

TypeScript

HTML/CSS

SQL

Learning

Lua

C#

GDScript

Web / Tools

React

Node.js

Git

Linux

GAME DEVELOPMENT

Actively learning game development fundamentals using Lua (Roblox Studio), C# (Unity), and GDScript (Godot). Familiar with basic 3D scene structure, scripting game logic, and prototyping small interactive experiences.

WEB DEVELOPMENT

Built full-stack and front-end projects with modern JavaScript frameworks (React), back-end scripting (Node.js, Python), and REST API integration. Comfortable with responsive design, CSS animations, and deploying to the web. Currently maintaining a personal portfolio site with a custom dark UI, music player, and real-time Discord integration.

EDUCATION

High School Student — Currently Enrolled

Self-studying computer science, game development, and software engineering alongside school curriculum.

PROJECTS & HIGHLIGHTS

■ Personal Portfolio Website

Dark aesthetic portfolio with SPA tab system, animated background videos, Discord Lanyard integration, Roblox profile card, custom music player with session state, and mobile-first responsive layout.

■ Discord Bot / Automation

Utility scripts in Python and JavaScript for Discord automation, webhook integration, and API handling.

■ Game Dev Prototypes (WIP)

Small Roblox experiences and Unity/Godot prototypes focusing on game mechanics and scripting logic.
